

## Gravitram Project

Our Gravitram has been on display at Sci-Tech for many years and prior to being at Sci-Tech it was on display at the Museum of Science and Nature in Dallas.

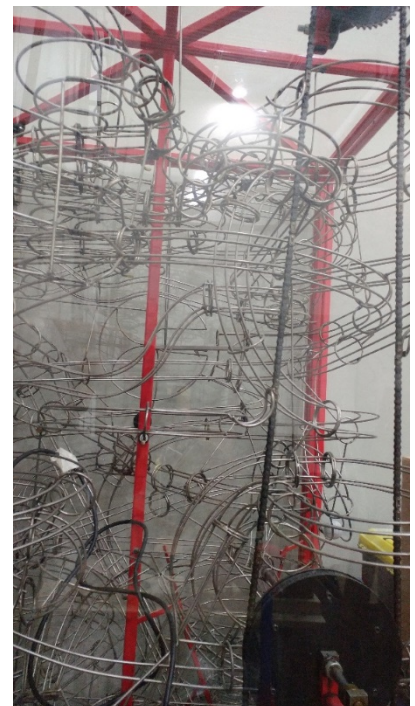

The exhibit works on an action reaction series of events triggered by a billiard ball. However after nearly 30 years of being on display it is in need of an over hall.

Project scope of work:

Repair broken welds through out to help with consistency and to stop the ball from dropping off the track.

Upgrade electronics: Safety switch for access door as well as install a push button to start the exhibit on the front of the display.

Sci-Tech can bring the display out to your site for ease of repair as well as provide all needed electronics materials.

Please feel free to contact Peter Claffey Executive Director at Sci-Tech with any additional questions [Peter.Claffey@scitechdiscovery.org](mailto:Peter.Claffey@scitechdiscovery.org)
